

Advanced

Introduced as a result of market demand, ICDL Advanced is one of the fastest growing ICDL certification products. The Australian Computer Society has started to roll out the product in Australia on a pilot basis.

ICDL Advanced is a higher-level programme designed for those who have successfully reached ICDL skills levels and wish to further enhance their computer skills.

Each Advanced module has been designed as a stand-alone certification in each respective area and candidates who successfully complete a module will be certified as Advanced users in that application.

The ICDL Advanced modules give candidates the opportunity to become expert in the use of these applications, acquiring skills sets over and above the routine features of the software.

Candidates who choose to complete all four Advanced modules are awarded with the new ICDL Expert certification, signifying expert-level ICDL competence.
